

2.4 Request Flow Explanation

text

1. User Action → 2. Frontend API Call → 3. Express Route → 4. Middleware

8. Response ← 7. Format Data ← 6. Database Query ← 5. Controller

Detailed Flow:

1. User clicks "Post Question" on ask.html
2. api.js sends POST request to /api/questions
3. Express routes to questionController.createQuestion
4. auth.js middleware validates JWT token
5. Controller validates input and saves to MySQL
6. Embedding generated for semantic search
7. Success response returned
8. Frontend shows success message and redirects
